

# Tarek Halloul

## Software Engineer

halloultarek1@gmail.com | <https://www.linkedin.com/tarekhaloul> | T-Fluffy (Tarek Halloul)  
(github.com) Hammam Sousse Delegation, Sousse, 4011, Tunisia | (216) 94542535

Hello, my name is Tarek, a software engineer, full-stack developer, and interactive game developer with expertise in the Unity engine. My passion lies in game and web technologies, using Angular or React for the frontend and .NET, Spring Boot, or Nest.js for the backend. Adaptable and self-reliant, I focus on developing my technical and personal skills to advance in the field of information technology.

## Professional Experience

### Mobile Developer (Freelance)

Oct 2024 - Mar 2025

**Homeopathy** | Governorate of Sousse, Tunisia

Implementation of a GPS detection solution with GeoApify in the admin version of the Homeo application.

### Angular Developer

Feb. 2024 - May 2024

**Webify Technology** | Governorate of Sousse, Tunisia

Implementation, correction and debugging of Angular client applications as a frontend developer.

### Trainer

August 2021 - January 2024

**GOMYCODE** | Sousse, Tunisia

Training young developers in the field of video game development using the Unity engine.

### R&D Intern (Final Year Project | ESP)

Feb. 2023 - Sep. 2023

**Lanterns Studios** | Governorate of Tunis, Tunisia

Final internship in engineering as a gameplay programmer at Lanterns Studio. Updating my game development skills with Unreal Engine and entering the video game industry.

### Web Development Intern (PFA | EYP)

March 2022 - June 2022

**CAMELSOFT LLC** | Sahloul, Tunisia

Full-stack web development internship using Angular technologies for the frontend and Spring Boot for the backend for a 3D model sales website, manipulating 3D elements with the Three JS library.

### Intern (Final Year Project | ESP)

Feb. 2019 - June 2019

**ENVAIST** | Hammam Sousse, Sousse, Tunisia

Creation of an educational application with augmented reality technology, using Vuforia technologies and developed primarily on Unity 3D.

### Technical Assistant Intern

June 2018 - July 2018

**TunisieTelecom** | Hammam Sousse, Sousse, Tunisia

Installation and maintenance of ADSL subscriptions and new ADSL line installations

## Key Skills

Web development, html5, css3, scss, javascript, Software development, Game development, OOP, Soft skills, Firebase, version control with Git, Photoshop & Illustrator, Algorithms, Agile methods, Web API, Angular, React, Unity engine, Unreal engine, Blender, C++, C#, Java, Spring Boot, NodeJS, Typescript, Three JS, jQuery, PyTorch, Python, MySQL, SQLite and MongoDB, docker, LaTeX, Google Gemini, ChatGPT, Deepseek (AI tools are used mainly in my research as well as development).

## Training

### EPI - International Multidisciplinary School

Sep 2020 - Sep 2023

Software Engineer in Computer Science and Software Engineering - Distinction: Excellent.

### ISITCOM Hammam Sousse, Tunisia

Sep 2016 - Jun 2019

Bachelor's degree in Computer Science and Communication Technologies - Distinction.

## Projects

### Web, Dotnet, Unity and Unreal projects:

Web application development (e-commerce applications, websites, etc.) using Angular, Spring Boot, and NodeJS. I can cite some of the projects that fall under this category:

- The creation of a prototype role-playing game (D&D) generator called "FantasyFightsApp" allows users to convert an adventure book into a complete role-playing game, enabling them to explore the adventures within a DotNet console application or a React web version. The solution is divided into two projects: a web frontend application using React and a DotNet backend application that converts PDFs from the "Fighting Fantasy" series into a database used by the web version.  
[Dotnet – PdfPig – Json – ASP.NET Core – OpenApi – Docker] [Under development...]
- Creation of a Fullstack Web solution for product management helping founders of small projects such as "tea rooms" or merchants to manage their stocks.  
[Dotnet – Angular – Docker – PostgreSQL] [Under development...]
- An online document editor for creating and modifying Word or PDF documents. This full-stack project, as its name suggests, is divided into a React client-side component and a .NET backend.  
[React – Dotnet – TypeScript – TailwindCSS – Tiptap library] [Under development...]
- Two Multiple versions of showcase web projects presenting my projects completed as a computer engineer and developer since the start of my career in this field.  
[Angular – Three.js – React]
- A backend for an online training website for students using NodeJS. [NodeJS – Postman – JavaScript]
- Creating a Symfony CRUD application for a web application to manage wheat silos. [Symfony – MySQL]
- The creation of an e-commerce website using Angular and Three.js for 3D product presentation.  
[Angular – Spring Boot – Three.js]
- A tool for converting multiple images into a single PDF file using Dotnet technology. [Dotnet – PdfSharp]

Development of various gameplay styles, including card games, narrative games, puzzle games, and educational games. Integration of augmented reality into games and simulations. My various projects include:

- The creation of a "Rummy" card game using the Godot game engine.  
[Godot – GDScript]
- My final year project for the computer engineering program for a commercial video game development studio "Lanterns Studio" entitled "LMM" allows the implementation of a system for recording multiple animations of a humanoid character into a single animation that transforms and changes according to the player's decisions.  
[Dotnet – ONNX – Unreal engine – Unity – PyTorch – C# – Python – C++]
- The implementation of augmented reality in a children's reading application at "Envast", where I used Vuforia technology and the Unity game development engine to create a mobile application dedicated to children on behalf of the publishing house "Kounouz" as well as the educational application for students of perimeter schools with the startup that I co-founded during my last two years of studies in software engineering.  
[Unity – Firebase – Vuforia – Figma]
- The creation of a prototype of an interactive mobile application for children for the startup "DM nova" with an interactive objective for educational purposes using the Unity video game development engine, Vuforia technologies and Figma for the user interface design.  
[Unity – Firebase – Vuforia – Figma]
- The creation of multiple 2D and 3D game styles exploring the potential of the Unity engine.  
[Unity]

### Mobile Development Projects:

- The implementation of a geolocation solution on the product of a startup called "Homeo", a mobile application, in which I implemented and tested the use of a geolocation widget allowing the location of a customer and a professional using GeoApify.  
[Flutter – Dart – Geoapify]
